

Did you see trees grow? Our Picture Post can!

In the winter of 2013, the Discovery Center added a Picture Post for measuring tree growth. These photos show a white birch tree over 3 years.

Insets show computer software used to measure the tree's diameter at the same spot in each photo. Over the years, the birch added 8.3% to its width.

Using the measuring guides below, how much did the red pine grow?
